

Grading summary

1p – by default

1p – the writing/editing style of the written document – clarity, neatness, care

4p - correct approach when building the model – argue each step

3p – correct implementation, live demo and oral explanations of the code
(you get 0p if you are not able to explain the code or you have explanatory comments in the code).

1p – correct answers for questions related to topics/notions discussed in the course
(e.g., what is stationarity; invertibility; PACF; the use of the Durbin-Levinson, the Innovations algorithms (not formulas learnt by heart), estimation methods, forecasting etc. ...)
