

Grading summary

S1

1p – by default

1p – the writing/editing style of the written document – clarity, neatness, care

3p - the appropriateness of the two way ANOVA method for the experiment that you choose; the post-hoc analysis; use of the permutation test

4p - implementation and explanations of the code and of the results (the hypotheses that are tested; why you get a certain degree of freedom; why you draw a certain conclusion etc.)

(you get 0p if you are not able to explain the code or you have explanatory comments in the code).

1p – correct answers for other questions related to topics/notions discussed in the course

S2

1p – by default

1p – the writing/editing style of the written document – clarity, neatness, care

4p - argue each step when building and validating the model

3p – correct implementation, live demo and oral explanations of the code
(you get 0p if you are not able to explain the code or you have explanatory comments in the code).

1p – correct answers for other questions related to topics/notions discussed in the course
